1. Project Title

WEARIFY – Rent • Buy • Repeat

A Hyperlocal Clothing Rental & Purchase App with 2–3 Hour Express Delivery

Introduction

In the modern digital era, consumer expectations for speed, convenience, and accessibility have significantly increased. With the rapid growth of e-commerce and on-demand services, people now expect instant solutions for their daily needs. Fashion is one such domain where urgency often plays a critical role, especially for occasions such as weddings, festivals, interviews, college events, and parties.

Despite the availability of numerous online fashion platforms, most focus on purchasing new clothing and require long delivery times. At the same time, local clothing shops possess a wide variety of fashion inventory that remains underutilized due to lack of digital exposure. This gap between urgent consumer needs and local shop availability creates a strong need for a hyperlocal, technology-driven solution.

WEARIFY is proposed as a hyperlocal clothing rental and purchase application that connects users with nearby local shops and enables express delivery within 2–3 hours.

2. Problem Statement

Urban consumers frequently face last-minute clothing requirements. Existing online fashion platforms typically take 2–5 days to deliver products, making them unsuitable for urgent needs. Clothing rental services are limited, fragmented, unorganized, and often restricted to metropolitan cities.

Local clothing retailers lack digital infrastructure and online visibility, resulting in underutilization of inventory and reduced revenue opportunities. Customers are forced to physically visit multiple shops to find suitable outfits, which is time-consuming and inefficient.

There is no unified digital platform that integrates:

- Hyperlocal shop discovery
- Clothing rental and purchase options
- Express same-day delivery
- Rental lifecycle and return management

This absence creates inconvenience for customers and lost business opportunities for local retailers.

3. Objective

The main objective of the WEARIFY project is to design and develop a hyperlocal digital platform that bridges the gap between customers and nearby local clothing retailers.

Specific Objectives:

- To provide a single platform for renting and purchasing clothes from nearby shops
- To enable fast 2–3 hour delivery for urgent clothing requirements
- To digitally empower small and medium local clothing retailers
- To reduce the cost of one-time clothing purchases through rentals
- To promote sustainable fashion and reduce textile waste
- To enhance customer convenience using location-based discovery

4. Proposed Solution

WEARIFY is a **hyperlocal mobile application** that connects users with **nearby local clothing shops** to **rent or buy outfits** with **2–3 hour express delivery**.

The app uses **location-based services** to show nearby shops and available outfits, reducing delivery time and effort. Users can browse clothes by **occasion, size, price, and rent/buy option**, place orders, and make **secure online payments**.

For rentals, WEARIFY manages the complete **rental lifecycle**, including booking duration, security deposits, returns, and quality checks. Local retailers are digitally onboarded, allowing them to list inventory, receive orders, and increase visibility without complex systems.

By integrating **local delivery partners**, WEARIFY ensures fast delivery while promoting **sustainable fashion** through clothing reuse.

5. Scope of the Project

The scope of the WEARIFY project includes:

- Hyperlocal operation within a city
- Clothing rental and purchase services
- Location-based shop and inventory discovery
- Secure online payment and order tracking
- Express delivery and scheduled returns
- Digital onboarding of local clothing retailers

Out of Scope:

- Intercity or international delivery

- Manufacturing of clothing
- Long-term warehousing

The project is designed to be scalable and can be expanded city-by-city in the future.

6. System Requirements

6.1 Hardware Requirements

- Smartphone (Android or iOS)
- Internet-enabled device
- Cloud server infrastructure
- GPS-enabled device

6.2 Software Requirements

- Android Studio / Flutter SDK
- Node.js runtime environment
- MongoDB database
- Payment gateway services
- Google Maps and Location APIs
- Web browser (Chrome/Edge)

7. Technology Stack

The WEARIFY application is developed using a Java Full Stack architecture, ensuring scalability, security, and reliable performance for a hyperlocal fashion platform.

Frontend Technologies

- HTML5 – Structure of web pages
- CSS3 – Styling and responsive design

- JavaScript – Client-side interactivity
- Bootstrap – Responsive and mobile-first UI design
- React.js / JSP – Dynamic user interface and component-based development

Backend Technologies

- Java – Core backend programming language
- Spring Boot – Backend framework for RESTful API development
- Spring MVC – Request handling and application flow
- Spring Security – Authentication and authorization

Database

- **MongoDB** – NoSQL database for storing users, shops, inventory, orders, rentals, and transactions

Server & Tools

- Apache Tomcat – Application server
- REST APIs – Communication between frontend and backend
- Maven – Dependency management and build automation
- Git & GitHub – Version control

Additional Services

- Payment Gateway Integration – Secure online transactions
- Location Services (Google Maps API) – Hyperlocal shop discovery
- Cloud Deployment – Hosting and scalability

8. Proposed Methodology / Workflow

The system follows a structured workflow:

1. User Registration & Login
Users register using email, phone number, or social login.
2. Location Detection
The app detects the user's location to show nearby shops.
3. Shop & Outfit Discovery
Users browse outfits with filters such as size, price, occasion, and rent/buy option.
4. Order Placement
Users select rental duration or purchase option and make payment.
5. Order Processing
The shop confirms availability and prepares the outfit.
6. Express Delivery
Local delivery partner delivers the outfit within 2–3 hours.
7. Return Management (Rental)
User schedules return; deposit is refunded after quality check.

9. Expected Outcomes

The successful implementation of **WEARIFY** is expected to deliver the following outcomes:

- **Fast access to clothing** for urgent occasions through 2–3 hour express delivery
- **Reduced last-minute shopping stress** for users
- **Affordable fashion solutions** through rental options instead of one-time purchases

- **Increased digital visibility and revenue** for local clothing retailers
- **Better utilization of unused shop inventory**
- **Improved customer convenience** through location-based shop discovery
- **Strengthening of the local economy** by supporting nearby businesses
- **Promotion of sustainable and responsible fashion** by encouraging clothing reuse
- **Efficient and transparent rental management** including returns and deposits
- **Faster service compared to traditional e-commerce platforms**

10. Future Enhancements

- AI-based outfit and size recommendations
- Subscription-based rental plans
- Virtual try-on using AR
- Expansion to accessories and footwear
- Vendor analytics and sales dashboard
- Integration with fashion brands and influencers
- Multi-language support

11. Business Model – WEARIFY

WEARIFY operates as a hyperlocal fashion marketplace connecting users and local retailers. The business model is designed to be scalable, sustainable, and user-friendly. It

creates value for users by providing fast and affordable fashion access, while empowering shop owners through increased visibility and digital sales opportunities.

12. Summary

WEARIFY leverages multiple revenue streams to remain financially sustainable. The model benefits users by offering convenient, fast, and affordable fashion solutions. It empowers local shops by digitalizing inventory and generating additional revenue. The system is scalable and can expand city-by-city, with future readiness for AI and data-driven features.

Conclusion

WEARIFY is a hyperlocal fashion platform that bridges the gap between users and nearby clothing shops by offering rent and buy options with 2–3 hour delivery. It addresses urgent fashion needs, empowers local retailers, and promotes sustainable fashion through rentals.

With its technology-driven approach, scalable model, and focus on local economic growth, WEARIFY enhances user convenience while making fashion accessible, affordable, and responsible.
